Introduction

Background and Objectives

This report contains the results of a telephone survey of residents in Wales conducted by the Ipsos MORI Social Research Institute on behalf of the Welsh Assembly Government.

The broad aim of the project is twofold:

- To give an overall idea of current levels of satisfaction with local public services in Wales.
- To allow some comparisons with equivalent or similar data in England.

The research focused upon four main issues:

- Public satisfaction with overall performance on a range of key local service providers.
- Public satisfaction with individual services.
- Expectations of future change in the quality of services.
- Perceptions of how well the public is kept informed by local service providers.

Methodology

MORI Telephone Surveys (MTS) interviewed a representative quota sample of residents (aged 16+), stratified across Wales.

1,010 interviews were conducted by telephone (using CATI – Computer Aided Telephone Interviewing), with fieldwork taking place between 7-23 March 2006. Quotas were set by gender, age, working status and housing tenure to the known population profile within Wales, using 2001 Census data. The data were then weighted at the processing stage by these same variables to correct for any discrepancies, ensuring maximum representativeness.

Data tables were produced, splitting the survey results by demographics, area and responses to specific questions in the survey. These form the basis of the analysis from which the report is written.

During fieldwork, quotas were also imposed upon the twenty-two local authority areas within Wales, to ensure that interviews were conducted with residents from across the country.

Presentation and Interpretation of the Data

It is worth emphasising that the survey deals with *peoples' perceptions rather than facts*. These perceptions may not accurately predict the actual behaviour of the residents of Wales. They are, however, extremely useful in planning how services can best be introduced and in providing pointers about actions required to change these perceptions.

Although where possible results from this survey have been benchmarked against data from Britain as a whole, obtained from our LGA Tracker survey (the Ipsos MORI Delivery Index) using the same – telephone - methodology in March 2006, in some cases this report uses data based on a face-to-face methodology (specifically our DH Tracker survey of English residents from Winter 2005 and People's Panel research among British residents conducted in 2002). Care should therefore be taken when making comparisons between these results, and it is best to treat them as indicative only. For example, we often obtain higher satisfaction ratings from telephone research compared to face-to-face surveys, owing to the smaller proportion of respondents citing a neutral category (e.g. 'neither satisfied nor dissatisfied'), owing to the absence of visual prompts in telephone surveys.

Where an asterisk (*) appears in charts or tables instead of a figure, this denotes a percentage of less than 0.5% but greater than zero.

Acknowledgements

MORI would like to take this opportunity to thank Professor Steve Martin from Cardiff University for his help and advice in developing the project. Most of all, we offer our thanks to all members of the public who gave up their time to take part in the research programme.

Publication of Data

As the Welsh Assembly Government has engaged MORI to undertake an objective programme of research, it is important to protect the interests of both organisations by ensuring that it is accurately reflected in any press release or publication of findings. As part of our standard terms and conditions of contract, the publication of the findings of this research is therefore subject to advance approval of MORI. Such approval will only be refused on the grounds of inaccuracy or misrepresentation.

Executive Summary

Satisfaction with public services

Health services are the most highly rated public services in Wales, both among patients and the population generally; satisfaction ratings appear to be broadly on a par with the rest of Britain.

Cultural services also tend to be well regarded in absolute terms (i.e. compared to other Welsh public services), with the vast majority of visitors to museums & galleries and libraries expressing satisfaction with their experience. Sports and leisure facilities is another area which receives good ratings among service users.

While direct comparisons between Wales and Britain overall need to be treated indicatively when looking at satisfaction levels (due to different survey methodologies being employed), one can make some broad comparisons and comments based on our knowledge that face-to-face surveys tend to produce lower satisfaction ratings than telephone.

Satisfaction ratings for both cultural and leisure services would appear to be healthy, and it is encouraging that some key street scene services, such as refuse collection and street lighting meet with the approval of most residents, and seem to be at least on a par with – if not above - ratings in the rest of Britain. Similarly, primary schools receive very respectable scores.

Although ratings for public transport in general appear to score *relatively* highly compared to Britain as a whole, residents are more dissatisfied with these than for any other service asked about in this survey within Wales itself, with the exception of the police.

Of greatest concern are the low satisfaction ratings for roads and pavement maintenance, and – to a lesser extent – street cleaning.

The table overleaf offers an indicative summation of how Welsh public services currently perform both in absolute terms and in relation to the rest of Britain.

Absolute		Relative to GB	
Highest	**Lowest**	**Well performing**	**Poorly performing**
Health (generally)	Police	Transport	Roads maintenance
Cultural (generally)	Transport	Libraries	Pavement maintenance
Refuse collection	Roads maintenance	Museums/ galleries	
Street lighting	Pavement maintenance	Primary schools	
Recycling	Street cleaning	Sports & leisure

Views on future service provision

More residents think that the NHS and policing services will deteriorate over the next 12 months – in this respect, attitudes mirror those across Britain as a whole.

However, the Welsh public has a more optimistic outlook than the rest of Britain when it comes to the short-term prospects for the environment, education and public transport – indeed circumstantial evidence suggests has been the case at least since the turn of the century.

In the case of the environment, Welsh residents are considerably more positive about the outlook than their English and Scottish counterparts.

Local authorities & the impact of information

Satisfaction with local authorities is slightly below that for the rest of Britain – although residents do tend to be satisfied rather than dissatisfied by a ratio of three to one.

This may be attributed, at least in part, to a paucity of information. A lower proportion of residents feel well informed about the services provided by their local authorities in Wales than in Britain generally, and our research consistently shows a correlation between information provision and satisfaction scores.

Furthermore, the lack of knowledge residents have about their local council is reflected in the relatively high proportion of people unable to offer an opinion on what they think about authorities. The result of this is that the balance of opinion shifts more towards councils being seen as remote and out of touch with local people, and not providing value for money.

Satisfaction with Public Service Providers

Health services have the highest levels of net satisfaction, in common with Britain as a whole – GPs (+80), the NHS overall (+65) and NHS Hospitals (+60) – including Ambulance Services (+41).

Satisfaction with Local Service Providers

	Satisfaction	Dissatisfaction	Net Satisfaction
Base: All respondents (1,010)	*%*	*%*	*±%*
GP	87	7	+80
NHS Overall	78	13	+65
NHS Hospitals	73	13	+60
Ambulance Services	43	2	+41
Local Authorities	60	20	+40
Museums & Art Galleries	40	2	+38
Local Bus Services	50	14	+36
Fire Services	36	*	+36
Police	47	15	+32
DWP	35	6	+29
Train Companies	38	12	+26
Jobcentre Plus	19	5	+14

Source: MORI

Ratings for the NHS overall appear to be high compared to the rest of Britain, which has a net satisfaction score of +45 percentage points in the latest DH Tracker research. Welsh residents also seem happier with their local doctor: while the net satisfaction score for Britain is +71, that for Wales is +80. However, the face-to-face methodology used in the Tracker survey means we cannot draw exact comparisons here. Because telephone surveys tend to generate higher satisfaction ratings than face-to-face surveys, it is more probable that satisfaction with public health services is on a par with the rest of Britain.

The LGA Tracker, contained in our most recent Delivery Index research across Britain, **does** offer a direct comparison for satisfaction with people's local authority. This shows that net satisfaction with local authorities in Wales is slightly below that for Britain generally; the five percentage point difference in satisfaction is (just) a statistically valid one.

Comparisons with Britain – satisfaction with local authority

	Satisfied	Dissatisfied	Net satisfied
	%	%	±%
PSWS March 2006 – **Wales** (1,010)	60	20	+40
Delivery Index March 2006 – **Britain** (1,001)	65	21	+44

Source: MORI

The further comparisons shown below are indicative only, as they derive from *face-to-face* surveys - the 2002 People's Panel (Britain) and Winter 2005 DH Tracker (England). No net satisfaction scores are shown due to the lower satisfaction ratings we would expect from face-to-face research *(see Introduction)* – which can lead to net scores being misleading. Hence the table shows dissatisfaction ratings only, which provide a more reliable guide, and show dissatisfaction levels to be broadly on a par with those in England..

Indicative Comparisons: Winter 2005 DH Tracker (England)

	PSWS Dissatisfied 2006 *(Base: 1,010)*	England Dissatisfied 2005 *(Base: 1,041)*	Difference in dissatisfaction scores (PSWS minus England benchmark)
	%	%	±%
GP	**7**	9	*-2*
NHS overall	**13**	18	*-5*

Source: MORI

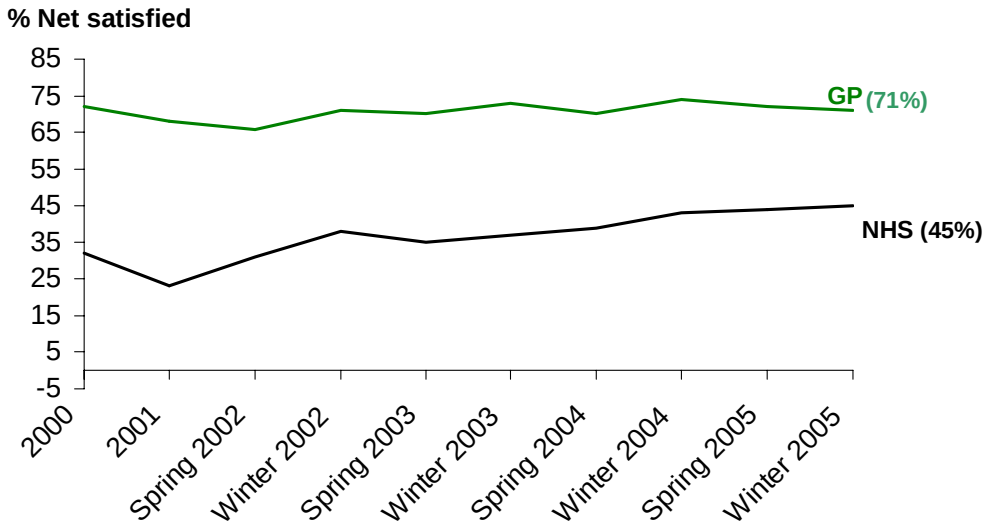

In the case of the People's Panel comparisons there will of course have been shifts in perceptions over the last four years. Satisfaction with most public services has been decreasing steadily since the late-1990s, though not – so far – with health services, as shown in the chart below which tracks the English public's attitudes over the last few years.

Indicative Comparisons: 2002 People's Panel (GB)

Perceptions of the Running of Health Services: England

Base: All respondents (1,041) Source: MORI

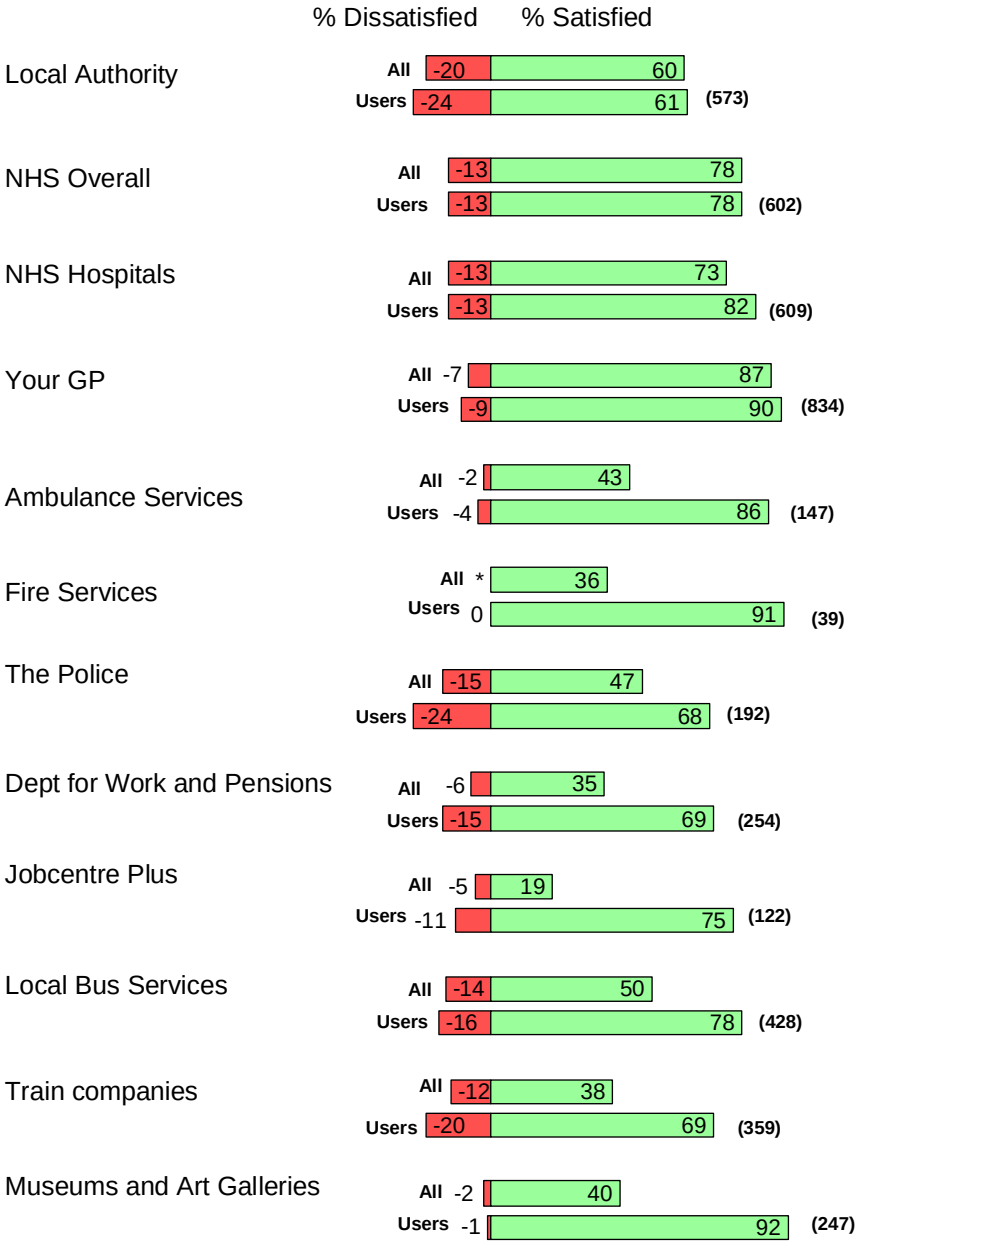

Another factor to take into account are the differing proportions of Welsh residents who use particular services. This can affect the proportions of those able to offer an opinion, and therefore depress or exaggerate the level of satisfaction accordingly. When we look at the views of *service users* for each of the non-universal service providers, we can more accurately gauge satisfaction within the context of experiencing the service.

The chart overleaf shows that GPs receive the highest ratings among the public as a whole (87% satisfaction), nine percentage points higher than for the NHS in general (as we find across Britain). This remains true among *users* of these respective services – and although active satisfaction is higher among NHS hospital users than among the general public, dissatisfaction is the same at 13%.

Despite only forming a minority of the overall population, the vast majority of those who visit museums and art galleries are satisfied with their experience.

Dissatisfaction is highest with the service provided by local authorities, the police and transport services, both among users and the public at large. However, as seen on the previous page, it would appear that the Welsh public may be less critical of public transport than the British public as a whole.

Satisfaction with Public Service Providers

Base: All respondents – other base sizes in brackets

Source: MORI

Views of Local Authorities

The 60% satisfied rating for local authorities and 20% dissatisfied figure can be considered just about adequate, but far below what should be possible. From studying the scores from a variety of single tier authorities we have worked with over the last five years, the vast majority achieve 50% satisfied ratings and rarely get ratings of more than 25% dissatisfied.

If we look at Westminster City Council, one of the high-flyers, it has consistently achieved scores of around three in four citizens satisfied and fewer than one in ten dissatisfied; its most recent ratings are 76% satisfied and 7% dissatisfied, giving a net satisfaction score of +69.

While clearly there are external factors such as deprivation to take into account depending on the specific area considered *(see our recent Frontiers of Performance report)*, you should be aiming for at least 70% satisfaction with local authorities across Wales, and looking to reduce the proportion of those dissatisfied by as much as half.

Source: MORI

One clue as to how this can be done is through better communication to residents about what their local authority can do – and *is* already doing – on their behalf. This is an issue we return to in the final section of this report.

The initial evidence for requiring better communications is seen in the fact that more Welsh residents in this survey (43%) *disagree* that their local authority provides good value for money than agree (35%), with one in five (21%) neutral.

Although active disagreement is roughly the same as among British residents, there are a far higher proportion of those who don't know (9% compared with 2% across Britain).

A similar picture emerges when residents are asked if they consider their local council to be remote and impersonal. Two fifths of respondents (41%) *agree* that their local authority is remote and impersonal compared to two thirds (35%) who say that they are not.

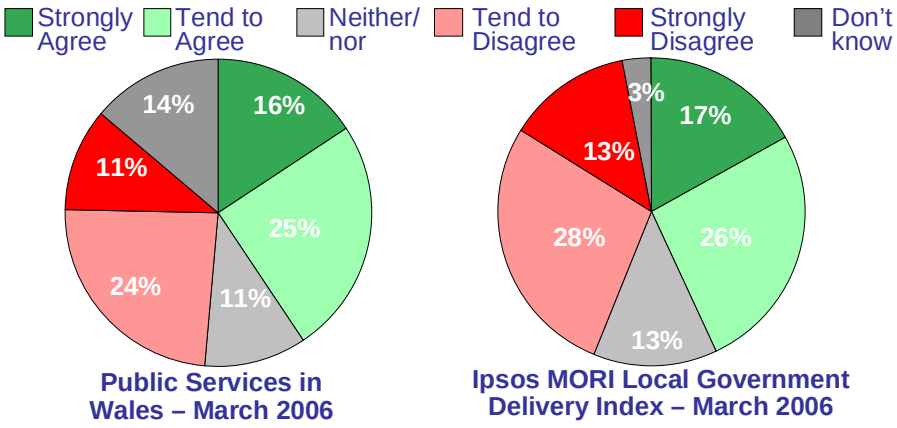

However, one in four people (24%) are neutral on this issue, many of them because they apparently have no knowledge at all about their council.

This suggests difficulties in communication between public bodies (or at least local councils) and the residents they serve – and indeed, as discussed later in this report, many residents say they do not feel at all well informed about what services are on offer.

Ipsos MORI

Remote and Impersonal?

Q I am going to read out some statements about [Local Authority]. I would like you to tell me the extent to which you agree or disagree with each? – Is Remote and Impersonal

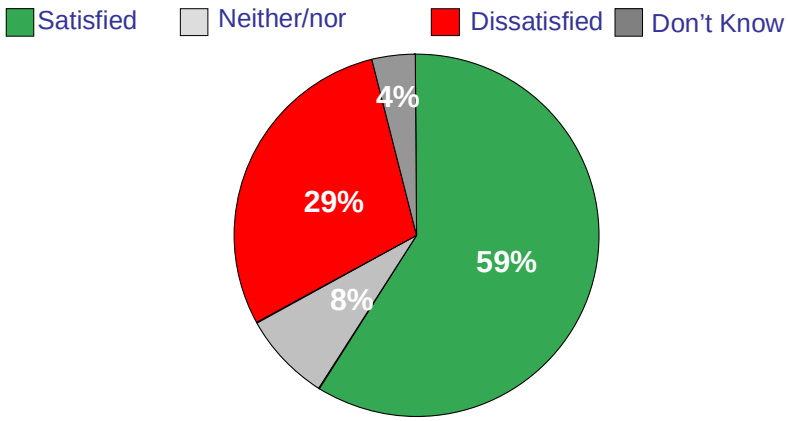

Base: All respondents

Encouragingly, three in five residents (59%) say they are satisfied with their local authority's efforts to make their local area a good place to live, while half this proportion (29%) are dissatisfied. One in ten (12%) are neutral on the subject.

Ipsos MORI

Satisfaction with Local Authority's Efforts to Improve Area

Q How satisfied or dissatisfied are you with [Local Authority]'s efforts to make this a good place to live and work?

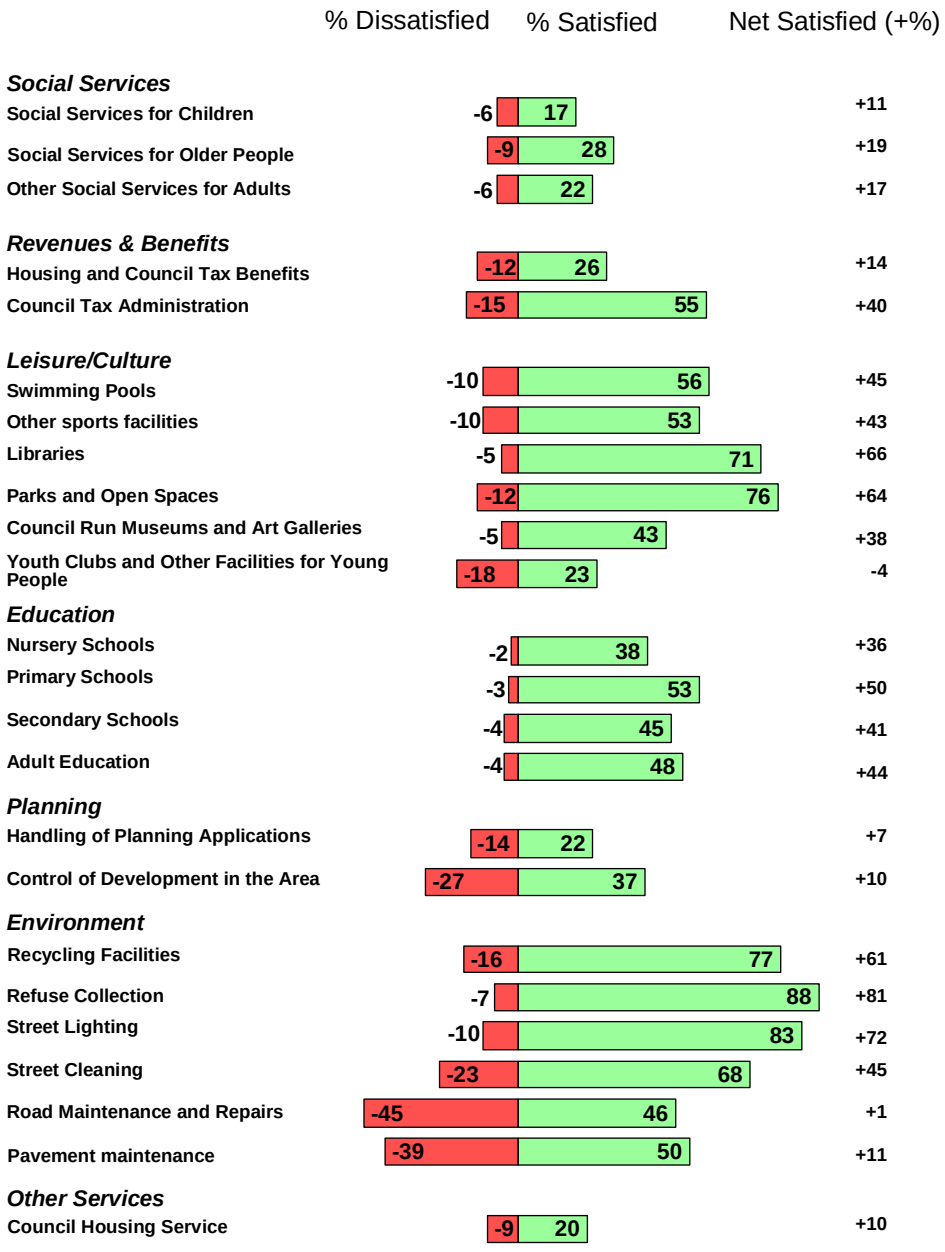

Base: All respondents

Satisfaction with Local Services

Refuse collection receives the highest satisfaction ratings of the universal services (88% satisfied) – followed by street lighting (83%) and recycling facilities (77%).

Clear areas of concern are the perceived state of roads and pavements, and – to a lesser extent – street cleaning.

Satisfaction with Local Public Services

Base: All respondents

Universal Services

Our database of local government benchmarking data, taken from surveys of individual single tier authorities across England over the past five years, show that Welsh authorities appear to perform reasonably well for all key universal services with the exception of roads maintenance and repairs. While this undoubtedly reflects the more rural characteristics of many locations in Wales compared to England, it should not be impossible to work towards around a ten percentage point increase in satisfaction over the next few years.

It should also be noted that the majority of our local government surveys are conducted face-to-face, and so comparisons with this telephone survey should be treated with some caution. For this reason the table below shows a broad range of satisfaction ratings (excluding extreme outliers), along with the highest score recorded within a particular authority over the last five years. The suggested target score also takes this difference of methodology into consideration.

Satisfaction with Universal Services: Indicative Comparisons

	PSWS 2006	2000-2005 'Satisfied' range *English authorities*	2000-2005 Highest satisfied rating *English authorities*	***Target satis-faction?***

Council tax collection/ administration	**55**	45-55	69	*60*
Pavement maintenance	**50**	40-55	66	*57*
Road maintenance	**46**	45-60	71	*55*

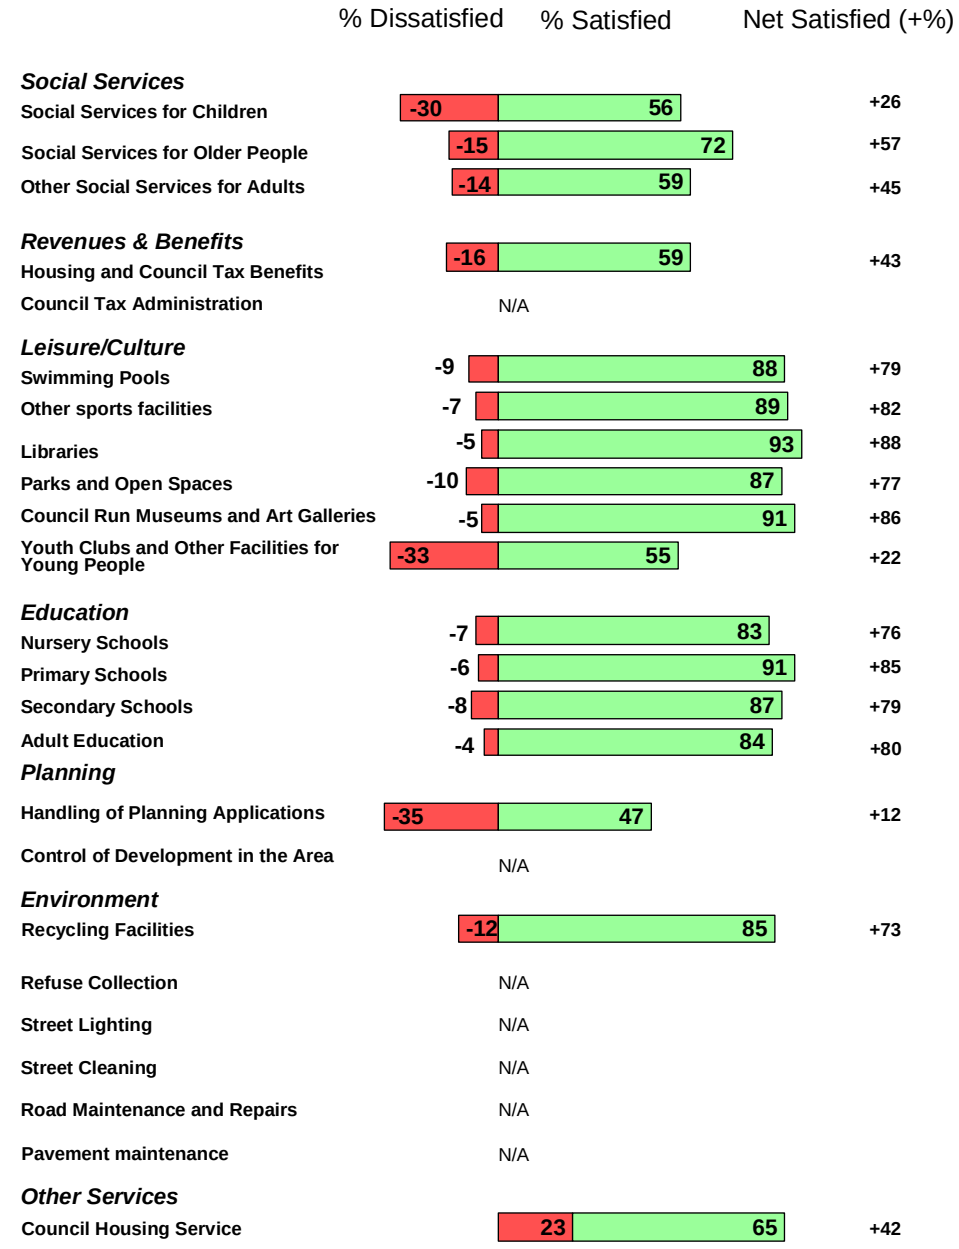

Source: MORI

Non-Universal Services

Ratings for non-universal public services compare very favourably to those for English authorities we have surveyed in the last five years, with customer satisfaction typically experienced by three in four users of a service. Libraries, museums/ galleries and primary schools are particularly well regarded, with sports and leisure facilities also performing strongly.

The following chart shows, where relevant, the proportions of users satisfied and dissatisfied with each service.

Satisfaction with Local Public Services among Service Users

Base: Users of services

Source: MORI

The table below compares results from this survey with information we have from surveys conducted with authorities in England over the last five years.

Where the proportion of service users expressing satisfaction in this survey is as high, or higher than that recorded by Ipsos MORI in England, this is highlighted in bold. Educational and recreational facilities receive ratings far higher than most English authorities; although we should avoid comparing too directly between the two methodologies used, this is still impressive.

Satisfaction with Non-Universal Services: Indicative Comparisons

Expectations of Changes in Performance

Residents in Wales are most optimistic about the future quality of education, with two in five (38%) expecting the service to get better, compared to one in five (18%) who expect it to get worse – a net score of +20 percentage points.

Slightly more (39%) expect the quality of the environment to improve; 28% think it will get worse, net +11 percentage points.

Respondents are most pessimistic about the NHS, with 43% expecting it to get worse over the next few years compared to a quarter who think it will improve – a net score of -18 percentage points.

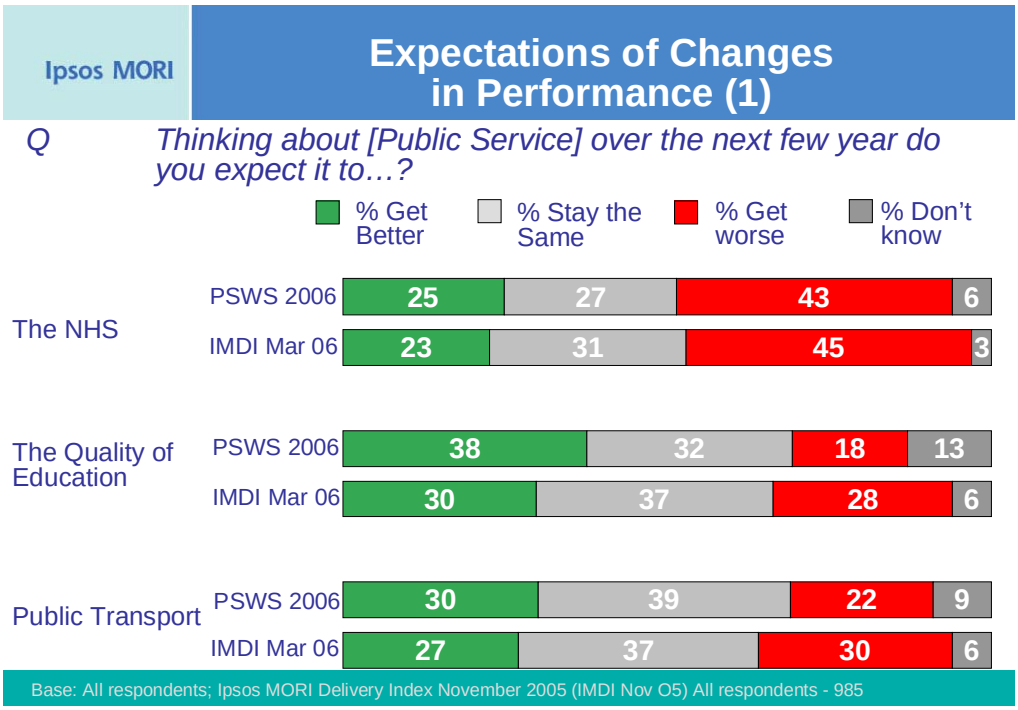

Q Thinking about [Public Service] over the next few years do you expect it to…?

	Get Better	Get Worse	Net Better
Base: All respondents (1,010)	*%*	*%*	*±%*
The quality of Education	38	18	+20
The quality of the Environment	39	28	+11
Public Transport	30	22	+8
Social Services	21	14	+7
The Way Your Area is Policed	25	28	**-3**
The NHS	25	43	**-18**

Source: MORI

Viewed against results for Britain as a whole (Ipsos MORI Delivery Index: March 2006), residents in Wales are more optimistic about the immediate future of public transport and especially education. In both cases more think the service will improve than think it will get worse.

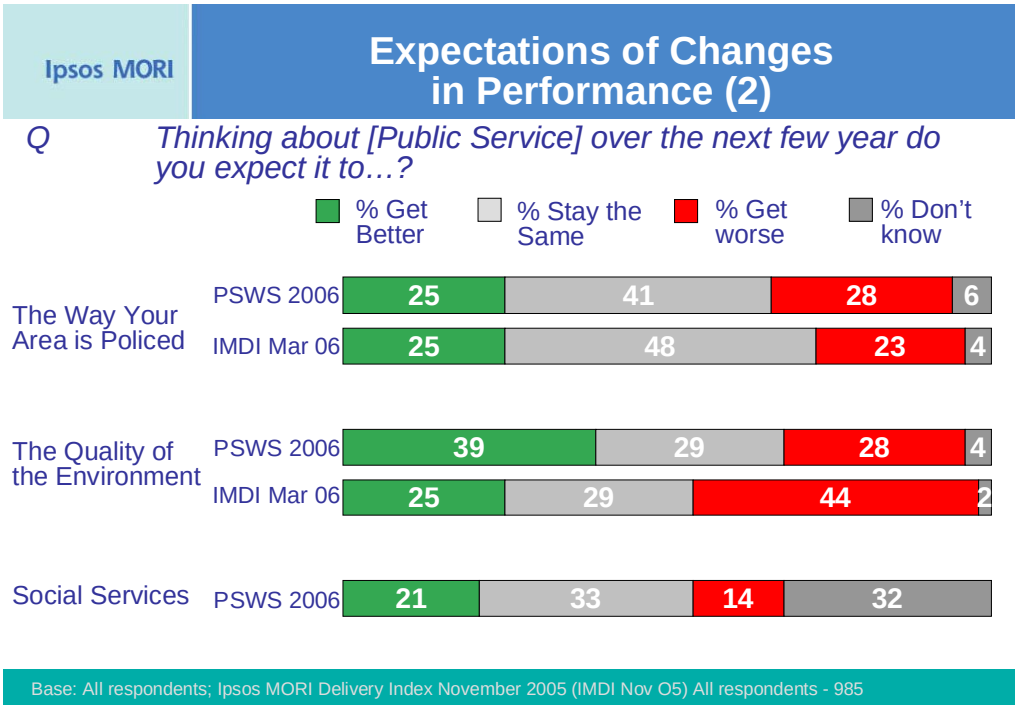

People are much less positive about the NHS, although slightly more so than in the rest of Britain. The proportion British-widely thinking the health service will deteriorate is currently twice that of those who believe it will improve.

Views towards the future of policing are more in line with the rest of Britain, with opinion evenly split between those who think it will improve and those who think it will get worse.

However, expectations among Welsh residents towards improving the quality of the environment are considerably higher than elsewhere. Two in five people (39%) expect it to get better - compared to just one in four (25%) British overall – with 28% taking the opposite viewpoint.

Of those who offer an opinion, most think that the standard of social services care will either stay the same or improve in the coming months.

In fact, this optimism is not new: there is circumstantial evidence that Welsh residents have traditionally had higher expectations than their English counterparts.

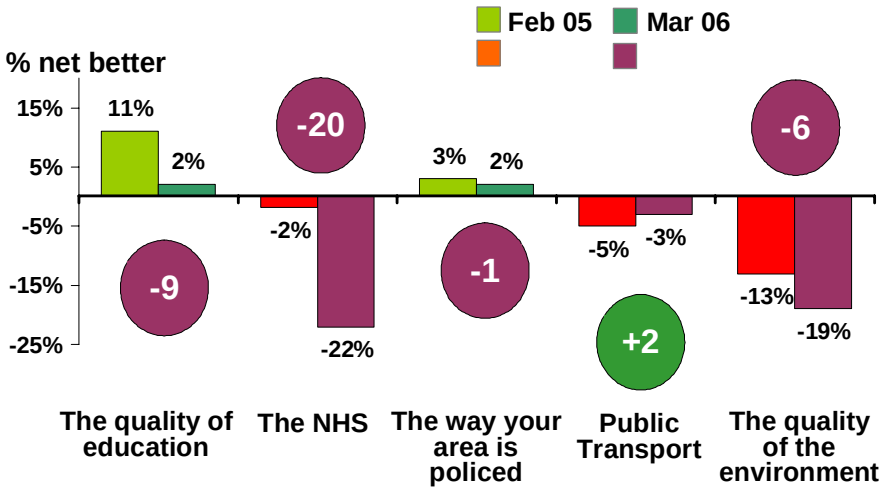

What factors might account for this difference in expectations? It is possible that– based on the higher proportion of Labour voters in Wales compared to the rest of Britain – that Welsh residents have a greater affinity with state services.

In the last twelve months, the public mood has got noticeably more pessimistic about the short term future of public services – particularly in the case of the NHS. In March 2005 the quality of the environment was the only issue where a significantly higher proportion thought things would get worse. While the proportion believing there will be a decline in environmental quality has increased since then, expectations of the health service's decline are currently even more widely held.

Ipsos MORI

Expectations of the Electorate Over the Year

Q *Thinking about… over the next few years, do you expect it to get better/worse?*

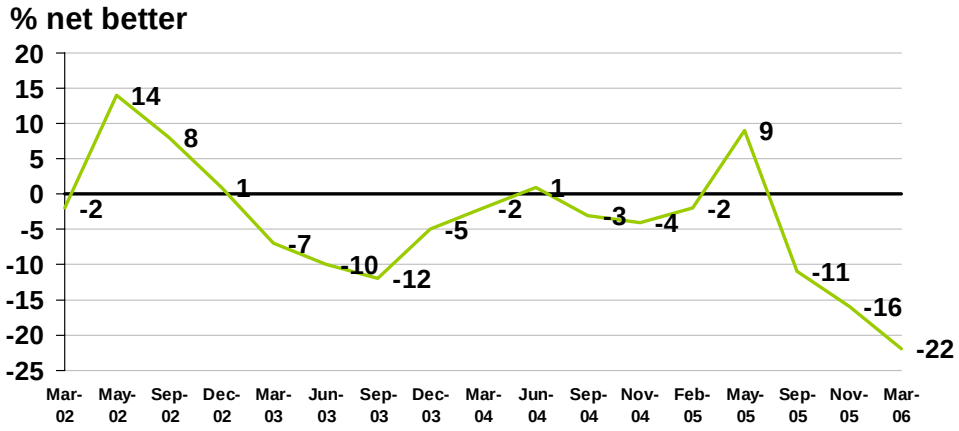

Base: 977 British Adults, 10-12 March 2006
Source: Ipsos MORI Social Research Institute Delivery Index

The following charts show how expectations of public services have fluctuated since early 2002. They show current public attitudes to be near the most pessimistic they have been for all services except public transport, and suggest we may be witnessing a general sense of unease - if not yet anxiety - about how things will develop.

Communications & Information

The service providers which Welsh residents feel keep them best informed are their GP (64%) and their local authority (56%). These are also the only organisations for which respondents are more likely to say they well informed, rather than not well informed, about the services provided. The police are considered the least effective at keeping residents informed.

The following table shows the combined "well informed", "not well informed" and net scores for each public service.

How well informed are Welsh residents?

	Well Informed	Not Well Informed	Net Informed
Base: All respondents (1,010)	*%*	*%*	*±%*
GP	64	31	+33
Local Authority	56	39	+17
NHS Overall	45	47	-2
Museums and Art Galleries	32	36	-4
NHS Hospitals	43	48	-5
Dept of Work and Pensions	31	36	-5
Local Bus Services	39	45	-6
Jobcentre Plus	19	26	-7
Fire Services	28	39	-11
Ambulance Services	24	40	-16
Train Companies	26	45	-19
Police	31	51	-20

Source: MORI

However, the "well informed" ratings for people's local authority (56%) fall short of those for many English single tier authorities. The typical range over the last five years of Ipsos MORI's local authority surveys is between 45% and 60% - but these results are derived from using face-to-face interviewing, and consequently are likely to be lower than if conducted by telephone.

Well Informed about Local Authority services: Indicative Comparisons

	PSWS 2006 "Well informed" rating	2000-2005 'Well informed" range ***English authorities***	2000-2005 Highest "well informed" rating ***English authorities***	***Target "well informed" ?***

Local Authority	**56**	45-60	74	*70*

Source: MORI

This is supported by our recent Delivery Index telephone research. The average figure among the British public for local authorities is 71% well informed, fifteen percentage points higher than that recorded for Wales in this survey.

Comparisons with Britain – % well informed by local authority

	Well informed	Not well informed	Net informed
	%	*%*	*±%*
PSWS March 2006 – **Wales** (1,010)	56	39	+17
Delivery Index March 2006 – **Britain** (1,001)	71	29	+42

Source: MORI

These results lend further weight to the recommendation that more effort should be made by councils in communicating what they do, what they want to achieve, and the services and benefits they provide, to local residents. This will involve active engagement and consultation, but also ensuring other channels such as newsletters are maintained on a regular basis. It is especially important for authorities to identify themselves with well-regarded services (such as sports and leisure activities), and to publicise these more widely.

It should also be noted that the two services which are seen to offer least information to residents – train companies and the police – are those that receive the lowest satisfaction ratings (see first section). Improving customer service – and thus hopefully residents' satisfaction with performance - needs to fully incorporate effective communications.

Appendices

Use of Local Services

Health services are the services most used by residents in Wales. Four fifths (83%) have used their GP in the last year, while three fifths have used either NHS Hospitals (61%) or the NHS overall (59%).

The next most used services are the local council (58%), and public transport services, such as local buses (46%) and train companies (37%).

The least used service is the Fire Brigade (3%), with significantly more people using the other emergency services – Ambulance (15%) and Police (20%).

Q Which of the following services, if any have you personally used or had contact with in the last year or so?

Base: All respondents (1,010)	%

Environmental services, such as refuse collection (76%) and recycling facilities (68%) are the most commonly used services of those provided by local councils.

These are followed by leisure/culture amenities, such as parks and open spaces (60%), libraries (47%), swimming pools (34%) and other sports facilities (33%).

The services least used include planning activities (e.g. control of development in the local area – 7%) and social services for the disadvantaged (e.g. social services for children – 4%).

Source: MORI

For example, on a question where 50% of the people in a sample of 500 respond with a particular answer, the chances are 95 in 100 that this result would not vary by more than 4 percentage points, plus or minus, from a complete coverage of the entire population using the same procedures.

Tolerances are also involved in the comparison of results from different parts of the sample. A difference, in other words, must be of at least a certain size to be considered statistically significant. The following table is a guide to the sampling tolerances applicable to comparisons.

	Differences required for significance at or near these percentages		
	10% or 90%	**30% or 70%**	**50%**
	±	**±**	**±**
Size of sample on which Survey result is based			
100 and 100	8	13	14

Definitions of Social Grades

The table below contains a brief list of social grade definitions as used by the Institute of Practitioners in Advertising. These groups are standard on all surveys carried out by Market & Opinion Research International (MORI) Limited.

Social Grades

	Social Class	Occupation of Chief Income Earner
A	Upper Middle Class	Higher managerial, administrative or professional
B	Middle Class	Intermediate managerial, administrative or professional
C1	Lower Middle Class	Supervisor or clerical and junior managerial, administrative or professional
C2	Skilled Working Class	Skilled manual workers
D	Working Class	Semi and unskilled manual workers
E	Those at the lowest levels of subsistence	State pensioners, etc, with no other earnings

Marked Up Questionnaire

- Results are based on 1,010 interviews with residents in Wales aged 16 or over conducted by telephone.
- Data are weighted to age, gender, working status and housing tenure.
- Fieldwork between 7th – 23rd March 2006.
- Where results do not sum to 100, this may be due to multiple responses, computer rounding or the exclusion of don't knows/not stated
- Results are based on all respondents unless otherwise stated
- An asterisk (*) represents a value of less than one half or one percent, but not zero
